

# Hack Sprint Problem Statement

**Title:** Future Meets Past: A Time Travel-Themed College Fest

**Objective:** Create a dynamic and engaging college fest website to provide information, interact with participants, and guide attendees through the multi-dimensional experience of a "Time Travel" themed event. The website should act as a digital hub where students can explore the different time periods represented at the fest, register for events, and stay updated about the festival's schedule, activities, and rules.

## Key Features:

- **Time Travel Exploration:** Each section of the fest should represent a different time period.  
For example:
  1. **Prehistoric Era:** A section themed with ancient times, cave paintings, and dinosaur-related events.
  2. **Medieval Times:** A medieval castle look with jousting events, knight costume contests, and more.
  3. **The Future:** A futuristic design featuring tech-driven events, robotics, and virtual reality games.
- **Event Registration & Schedule:**
  1. Users should be able to register for different events online.
  2. The website should display an interactive schedule that lists all events under different time periods, highlighting their locations and timings.
- **Time Traveler's Map:**
  1. An interactive map of the campus showing event locations, allowing attendees to "travel" through different time periods. The map should feature themed icons and animation to match the time travel theme.
- **Interactive Features:**
  1. **Photo Gallery:** A time-lapse photo gallery that lets users upload and share their best costume or event photos.
  2. **Event Voting:** Let users vote for their favorite event or time period, adding a fun interactive element.
- **Ticketing & Merchandise:**
  1. Users should be able to buy tickets and exclusive fest merchandise like time travel-themed T-shirts or accessories online.
- **Theme-Based Aesthetics & Design:**
  1. The website's design should reflect a time travel theme, with elements that transition between past, present, and future. Think of shifting visual styles, dynamic color schemes, and thematic typography.
- **Social Media Integration:**
  1. Integrate social media platforms to allow users to share their experiences and promote the event using a unique hashtag. Add a social feed where users can see real-time updates and photos shared by others.
- **Countdown Timer:**
  1. A countdown to the fest with a ticking clock animation that speeds up, symbolizing time traveling, and gives the event an exciting, futuristic touch.

# Hack Sprint Problem Statement

## Key Features:

- **Deliverables:**
  1. Fully functional event website
  2. A responsive, user-friendly design optimized for both desktop and mobile
  3. A visually engaging interface with the time travel theme evident in colors, fonts, and animations
  4. Integration with a backend for event management, user registrations, and ticketing
- **Success Criteria:**
  1. The website provides a seamless user experience, allowing attendees to easily register for events, explore the different time periods, and engage with the fest in an exciting, futuristic way.
  2. The website is visually attractive and clearly reflects the time travel theme, with smooth transitions and an immersive experience.
  3. Social media and user-generated content are effectively integrated, ensuring wide interaction before and during the event.
  4. This web app will enhance the experience for both participants and organizers, making the fest feel like a real journey through time!
